SAVING YOU TIME. IMPROVING YOUR RESEARCH.

Academic studies and the experience of professionals back the common sense conclusion that the Form 4 data filed daily at the SEC is a profitable data stream to mine for investment intelligence. But most analysts and investors use commodity insider feeds that are full of noise and time-consuming to analyze, or expensive ratings services that employ last century's simplistic insider scoring methodology.

InsiderInsights combines statistical returns with behavioral analysis to effectively quantify this valuable qualitative information feed. Decades of experience analyzing insider filings is programmed into our systems for harvesting, tagging, and analyzing the insider trading forms as soon as they arrive at the SEC each day, so clients can efficiently use insider data as a primary, secondary or tertiary research input.

InsiderInsights compiles Daily & Weekly reports that list US equities with recent insider activity, along with our proprietary, independently validated **Company Ratings** clearly indicating the *Significance Level* of insiders' sentiment on their stock. Our **Monthly Special Screens** further combine our Ratings with various fundamental and price action criteria, to highlight the best value, growth, momentum, and short ideas coming from the executive suite.

For information about our Company Ratings, Online Screening Tools, Portfolio Alerts, bulk seat-based subscriptions, and API Products, Call (212) 784-6860 or email Jonathan@InsiderInsights.com.

KEY FOR INSIDERINSIGHTS COMPANY RATINGS:

	+3 SIGNIFICANTLY BULLISH	Interpreting our color-coded Ratings icons is straightforward: Green is Bullish; Red is Bearish. Some Significantly Bullish and Bearish Ratings are clearly stronger than others. Reasons for a Significant Rating garnering 2 or 3 colored icons instead of just one include: clusters of insiders acting similarly; insiders having very predictive track records (as per our Insider Statistics); large \$ value transactions, and trades resulting in large changes in holdings; transactions that represent reversals of opinion, and; many other proprietary metrics and behavioral factors. Despite computing and relaying different strengths of Significant insider signals, however, we do not purport that a +3 or -3 Significance Rating is three times more likely to be correct, or is more likely to result in a larger stock move. <ul style="list-style-type: none"> Our back tests and experience indicate that the major alpha generation comes from the fact that a stock's insider activity has surpassed our calculated threshold of Significance. The strength of Significance is less important. It is further valid to consider stocks with Ratings that are merely Leaning Bullish or Bearish in your long and short analysis, as these Ratings have also proved to generate alpha, though less than Significant Ratings. Ratings should also be interpreted in concert with a stock's price action. It is normal behavior for insiders to buy when their stock has fallen in price, and sell when it rises sharply. So even an Insignificantly Bullish Rating on a stock that has doubled, or Insignificantly Bearish Rating on a stock that has halved in price imparts intelligence. Our Ratings are considered "active" for 3 months, or until replaced by another Rating.
