Teleflex Investor Presentation

May 2019

Teleflex®

Forward Looking Statements

This presentation and our discussion contain forward-looking information and statements, which inherently involve risks and uncertainties that could cause actual results to differ from those projected or implied in the forward–looking statements. These statements involve known and unknown risks, uncertainties and other factors that may cause actual results or events to differ materially from those anticipated in such forward-looking statements, including those risks and uncertainties discussed in our SEC filings, including our most recent Annual Report on Form 10-K. The forward-looking statements included in this presentation should not be unduly relied upon. These statements speak only as of the date made. Other than as required by applicable law, we do not intend, and do not assume any obligation, to update these forward-looking statements.

This presentation reflects continuing operations.

Making a Difference

Teleflex products are used everyday:

31,000
In 31,000 surgical procedures in the United States

1,600
To help more than 1,600 patients who require vascular access intervention globally

6,000
To care for more than 6,000 patients globally in the Intensive Care Unit

3,200
By emergency responders to treat 3,200 patients in the field globally

Statistics included in the graphic above were calculated based on 2016 sales data, and management assumptions and estimates

Teleflex®

Demographics and Industry Trends in Our Favor

10,000

People turn 65 in the U.S. everyday[1]

Lower acuity patients moving to lower cost sites of service

1.1B

People 50+ in Asia by 2025[2]

Teleflex Investment Thesis

Global Leadership	• **Leading positions** in growing markets (vascular, interventional access, interventional urology) • Established and **respected global brands**
Unique Size	• **Global scale to succeed** in today's healthcare marketplace • **More nimble** than larger device companies
Track Record of Execution	• **~4% average annual organic constant currency revenue growth 2015 – 2017; 5.1% in FY18** • **560 basis point adjusted gross margin expansion 2015 – 2018** • **570 basis point adjusted operating margin expansion 2015 – 2018** • **Adjusted earnings per share CAGR 16.1% 2015 - 2018**
Momentum in 2019	• **Interventional Urology, Interventional Access and Asia businesses driving 2019 revenue growth**

Note: See appendicies for reconciliations of non-GAAP financial measures to the most comparable GAAP financial measures.

Teleflex®

Core Strategic Building Blocks

Teleflex is a Differentiated Med Tech Asset

Drive Constant Currency Revenue Growth

- Address major healthcare challenges
- Improve outcomes with less invasive, evidence-based procedures
- Accelerate long term revenue growth through scale M&A

Deliver Non-Revenue Dependent Margin Expansion

- Execute restructuring and footprint realignment initiatives
- Take more of our business direct
- Leverage M&A across global infrastructure

Continue to be a Serial Acquirer

- Acquire high-growth, high-margin businesses with differentiated assets
- Focus on scale and late stage technologies
- Improve process with each transaction

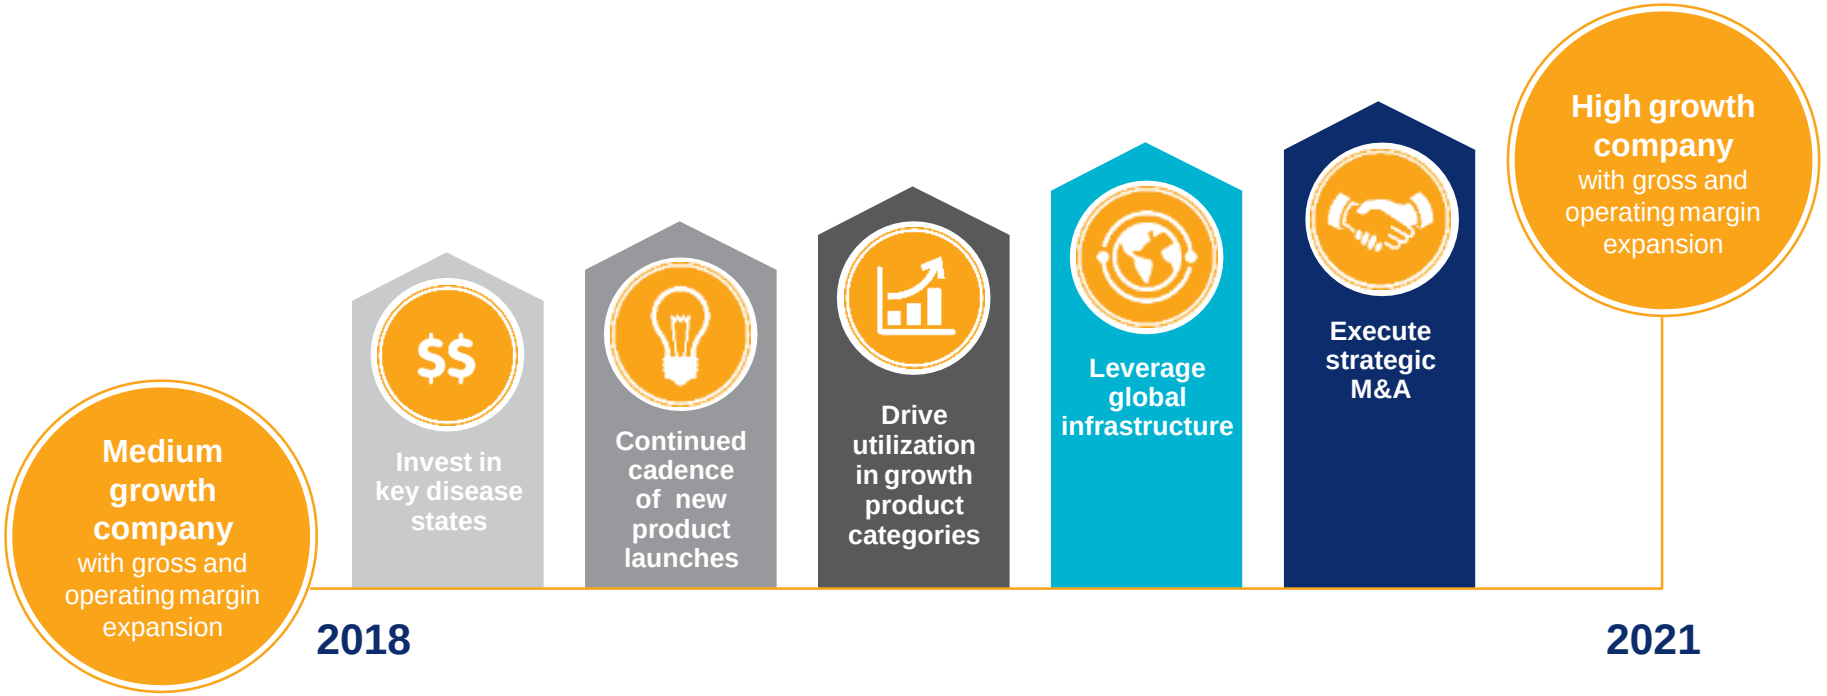
Align Portfolio with Favorable Demographics

- Focus product suite on procedures that cannot be postponed
- Focus commercial efforts in geographies with improving demographics

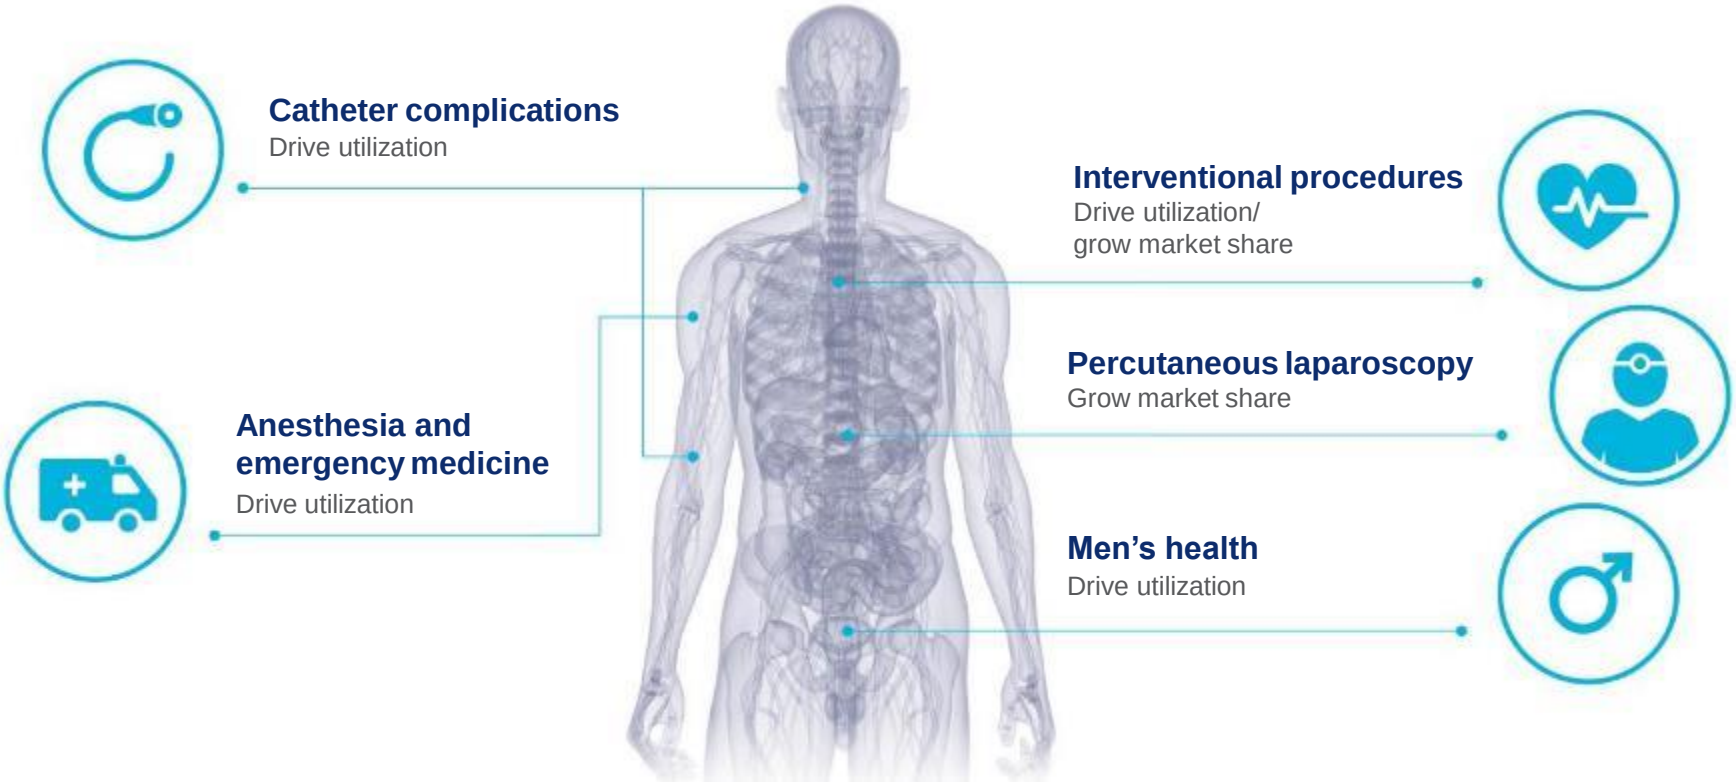
Continue to Attract Key Talent

- Focus on culture
- Live our core values
- Keep people at the center of all we do

Teleflex 2021: 3 Year Growth Drivers



Invest in Key Disease States and Markets



Drive Utilization in Growth Product Categories

*The MANTA Vascular Closure Device is currently marketed in Europe but remains in limited market release in the United States.

Leverage Global Infrastructure

ORANGE: Americas
BLUE: Europe, Middle East and Africa
GREEN: Asia Pacific

Strategies

- Realize margin expansion through ongoing restructuring initiatives
- Leverage recent go-directs to strengthen control of commercial channels in Europe and Asia
- Drive adoption of NeoTract and VSI products in new markets
- Drive clinically differentiated new products across vascular, interventional, surgical and urology

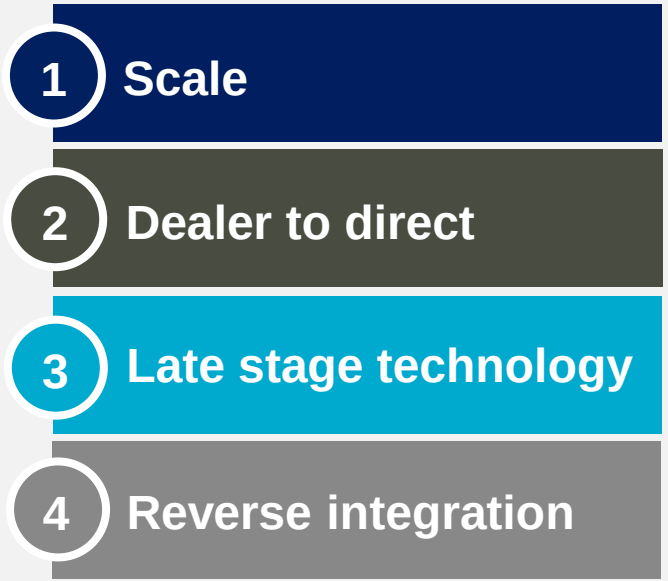
Teleflex®

Execute Disciplined M&A Strategy

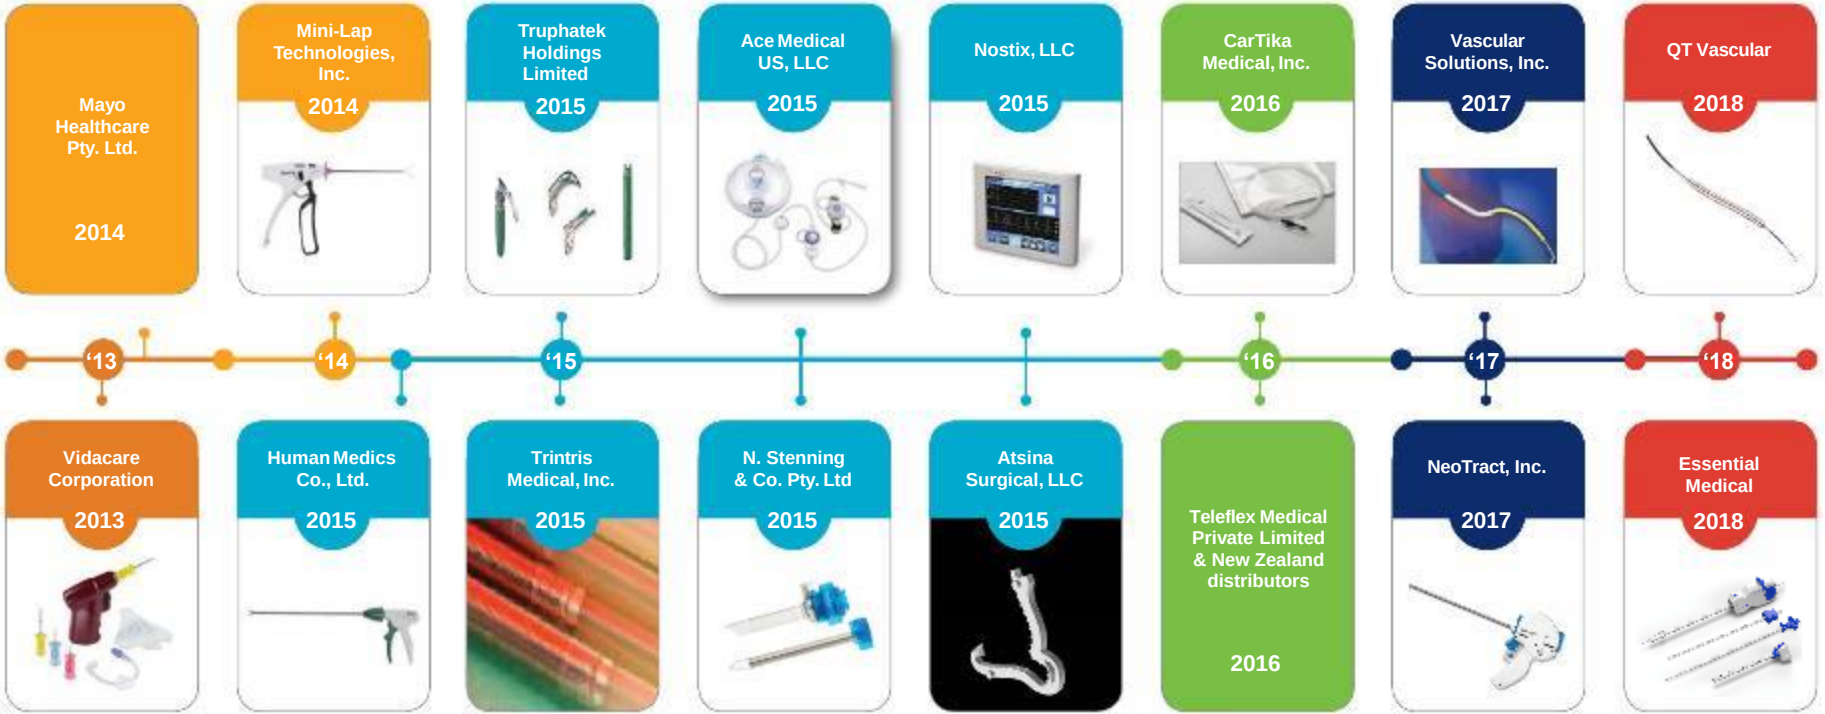
Acquisition Criteria

- Fits existing business units and call points
- Provides superior clinical benefit to existing alternatives
- Provides cost-benefit to the hospital
- Strong IP and patent protection
- Long product life cycles

M&A Focus



Track Record of Value Creating Acquisitions



Teleflex®

Key Investment Highlights

- Diversified, global medical technology company
- Well-positioned to take advantage of favorable industry dynamics
- Leading market positions with established global brands
- Diversified customer and supplier base
- Strong cash flow generation and proven history of deleveraging and margin expansion
- Experienced management team

Teleflex®

THANK YOU

Teleflex®

Anesthesia and Emergency Medicine: Arrow® EZ-IO® Intraosseous Vascular Access Device

Top Market Trends

- >137 million visits to the emergency room in the U.S. annually[1]
- There are >500,000 adult occurrences of cardiac arrest yearly in the US with an estimated 10% survival rate[2]
- Sepsis kills a patient in the U.S. every 2.3 Minutes.[3] As many as 80% of sepsis deaths could be prevented with rapid diagnosis and treatment[4]

Growth Strategy

- Continued leadership in professional, clinical and product training
- Methodical training on protocol for optimal outcomes
- Expand IP position in mechanical intraosseous access segment

Teleflex®

Anesthesia/Emergency Medicine: RePlas® FreezeDried Plasma

Top Market Trends

- >137 million visits to the emergency room in the U.S. annually[1]
- Minimal plasma availability in challenging environments (e.g. prehospital, remote/rural, battlefield settings), despite demand and opportunity to save many lives
- Traumatic injuries with hemorrhage require plasma transfusion to stop life-threatening bleeding
- FDA and DoD launched joint program to expedite medical products intended to save lives of US military; including freezedried plasma

Growth Strategy

- Partner with military through accelerated BLA regulatory pathway; conduct confirmatory efficacy study post licensure
- Establish battlefield (medic) or prehospital/remote settings (EMS paramedic)

RePlas® FreezeDried Plasma

RePlas® FDP unit *(equivalent to one FFP unit)*

Sterile Water for Injection (SWFI) 250ml

Fluid transfer set

Blood set for transfusion

BLA submission expected by Q3 2019

*Does not include civilian trauma hospitals

Teleflex®

Interventional Procedures

Top Market Trends

- Coronary artery disease is the most common type of heart disease in the US – cause of more than 370,000 deaths annually[1]
- Over 1 million percutaneous coronary interventions (PCI) are performed in the US every year[2]
- Approximately 8.5 million Americans suffer from peripheral arterial disease (PAD)[3]

Growth Strategy

- Expand new product pipeline
- Build brand awareness
- Expand professional education programs
- Deliver growth through M&A

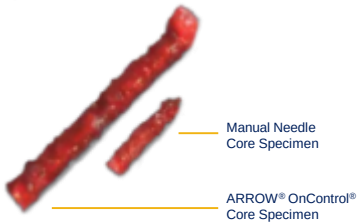
Teleflex®

ARROW® OnControl® Powered Bone Access System

~$160M

On-Control® Total Potential Addressable U.S. Market[1]



Powered bone marrow biopsy device vs. manual biopsy devices:

- Consistently larger, high quality core specimens[1-4]
- Demonstrated less patient insertion pain[2] and significantly less post-procedure patient pain[4]
- Fewer second-attempt procedures required[1-3]
- Up to 55% faster procedure time to improve efficiency[1-4]
- Easy to learn, operate, and control[6]
- Demonstrated greater overall patient satisfaction[1]

Representative specimens are shown for illustrative purposes only. Individual results may vary.

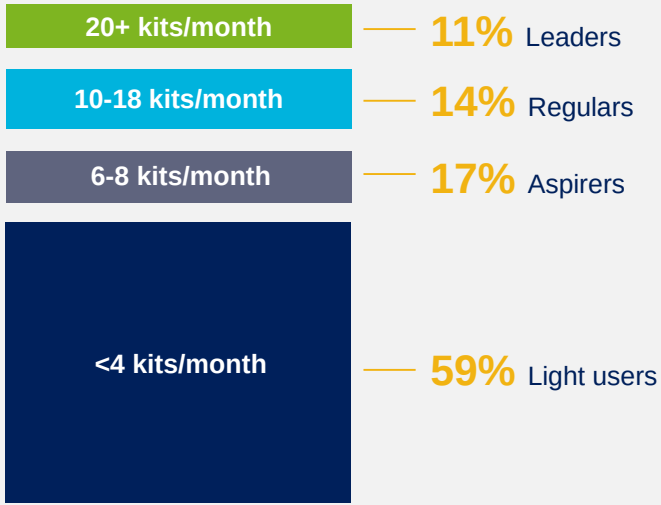
Teleflex®

OnControl® System Significant Utilization Opportunity

OnControl® System North America Utilization per Account



Strategies to Drive Utilization:

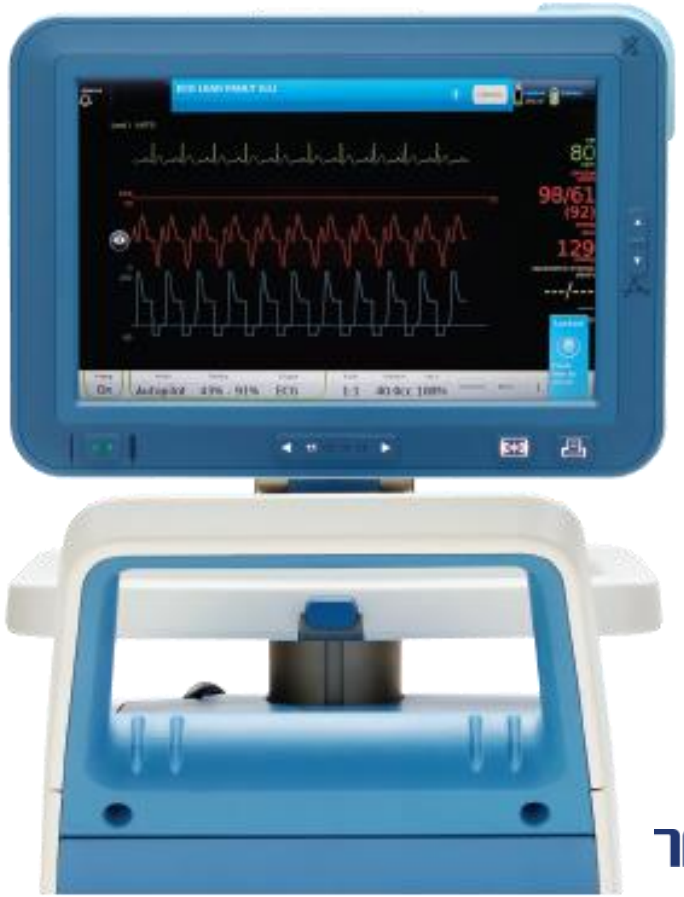
- Invest in professional education and cadaver training
- Leverage larger interventional sales channel
- Partner with key decision makers:
  - Interventional radiology, pathology, oncology

1. Management estimates based on: IMS Quintiles data; state, commercial and national Medicare billing data; On-Control ASP

Arrow® AC3 Optimus® Intra-Aortic Balloon Pump

Advanced IABP performance even in the most critical conditions

- With the onset of an elevated heart rate or arrhythmia, the patient's survival can suddenly depend on the ability of the IABP to keep pace with the situation
- The AC3 Optimus® intra-aortic balloon pump provides intra-beat inflation timing accuracy across a broad range of patient conditions — including those with severe arrhythmias[1,2]



1. Donelli A, Jansen JRC, Hoeksel B, et al. Performance of a real-time dicrotic notch detection and prediction algorithm in arrhythmic human aortic pressure signals. J Clin Monit. 2002;17(3-4):181-185. Study sponsored by Teleflex.

Teleflex®

Turnpike® Catheters

Turnpike® Spiral Catheter

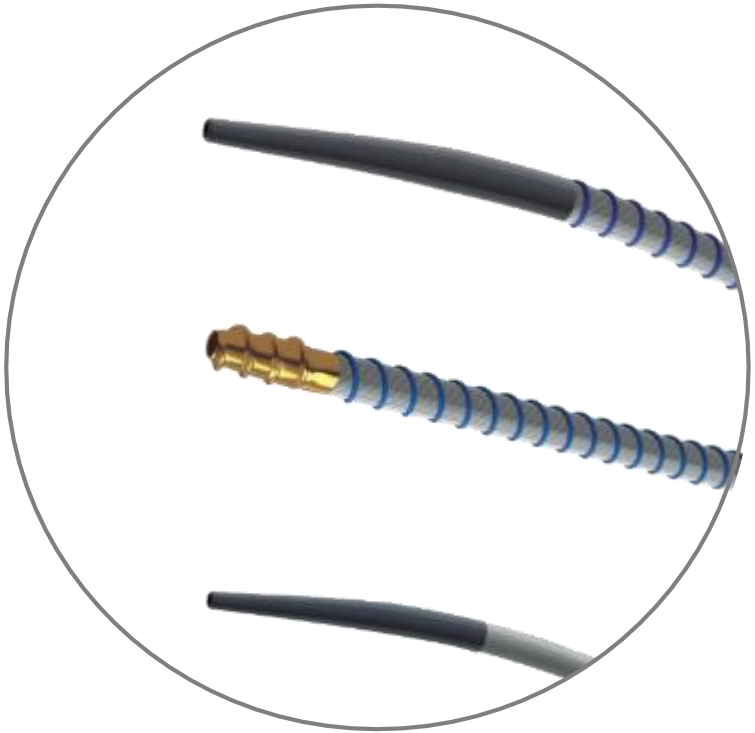
Distal nylon coil provides rotational assistance for enhanced trackability

Turnpike® Gold Catheter

Gold-plated, threaded metallic tip for enhanced advancement

Turnpike® LP Catheter

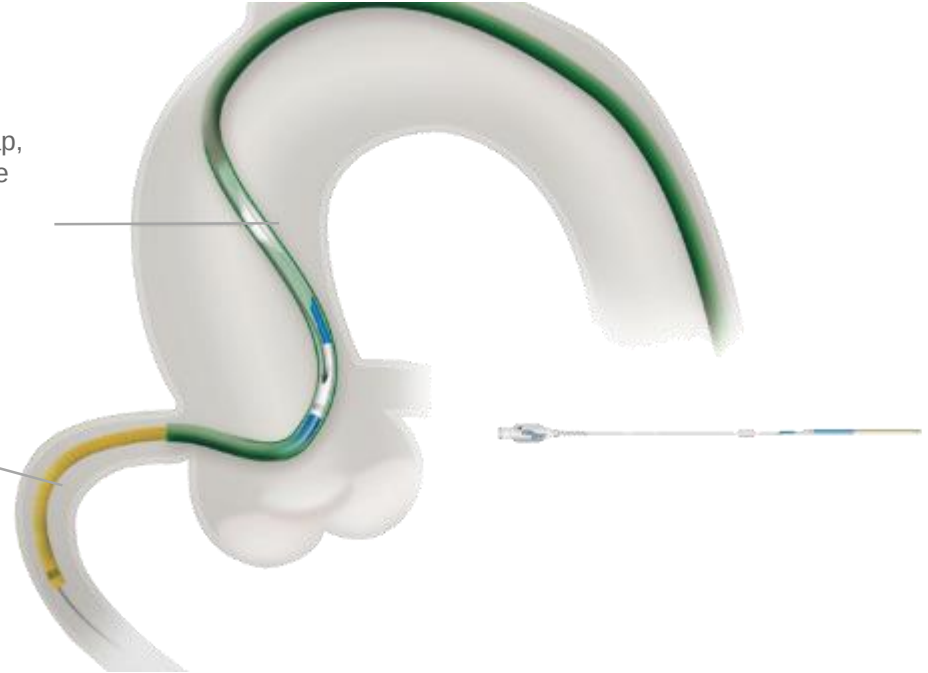
Low-profile version with greater tip and distal shaft flexibility for advancement through extreme tortuosity



TrapLiner® Catheter

Guide Extension Plus Wire Trapping

- Balloon inflates to maintain guidewire position
- Rapid exchange guide extension for backup support and deep-seating
- Gold radiopaque marker identifies trapping balloon location



Teleflex®

Percutaneous Laparoscopy

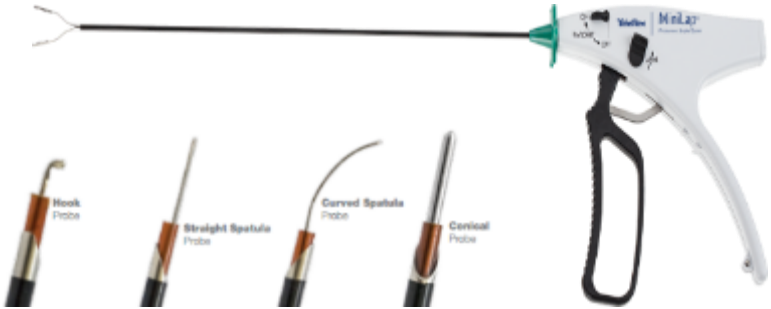
Top Market Trends

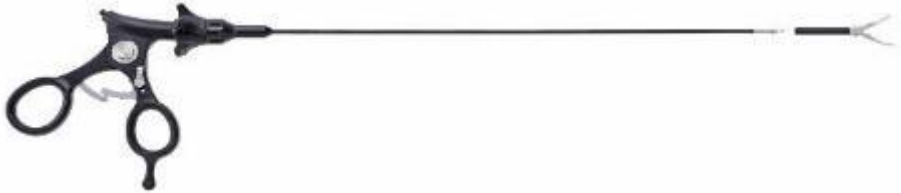
- 3.5 million laparoscopic procedures performed in the US Annually[1]
- Patient and clinician demand for decreased trauma and enhanced safety
- Patient satisfaction influence on reimbursement
- Shifts to outcome based medicine

Growth Strategy

- Broad awareness through market development activities generate demand for targeted elective procedures
- Deepen surgical congress society relationships
- Build clinical evidence with key teaching institutions
- Continued investment in refining and broadening product portfolio

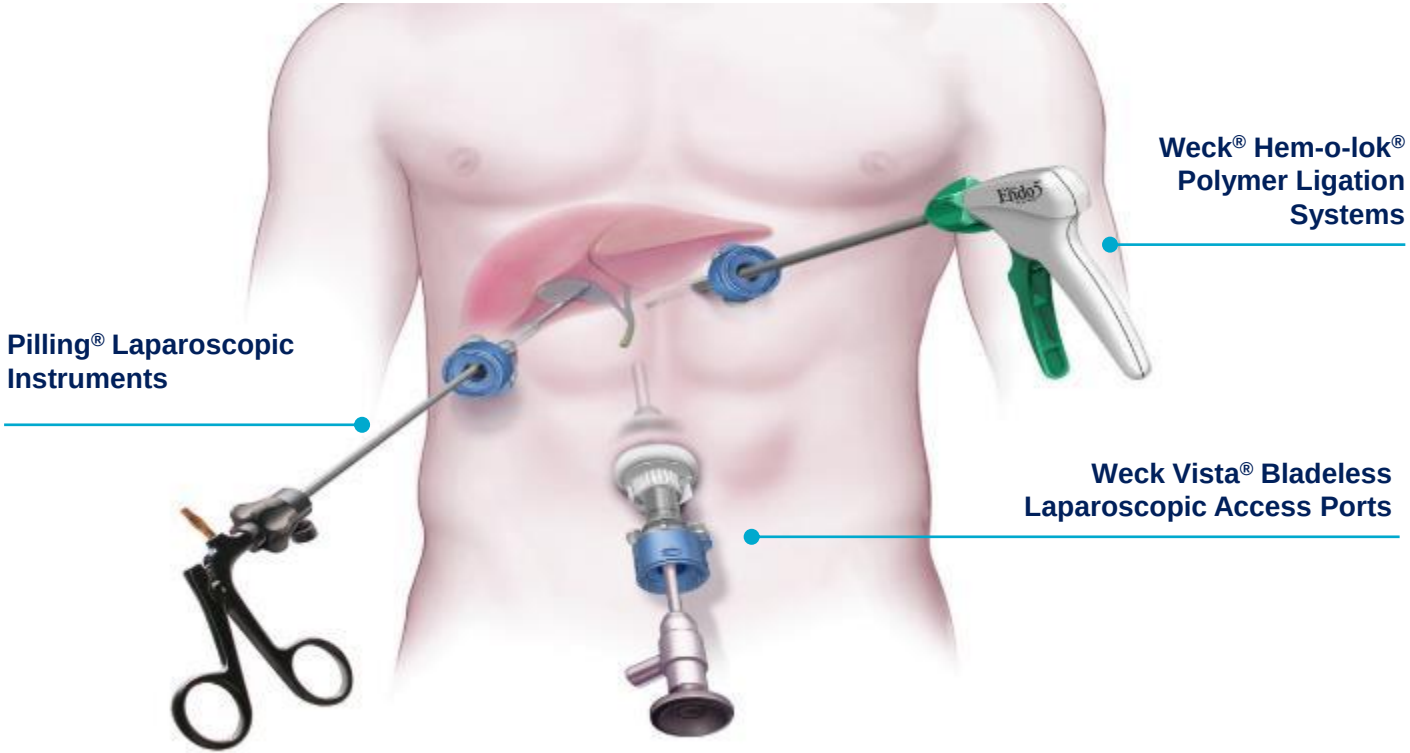
Percutaneous Access Devices





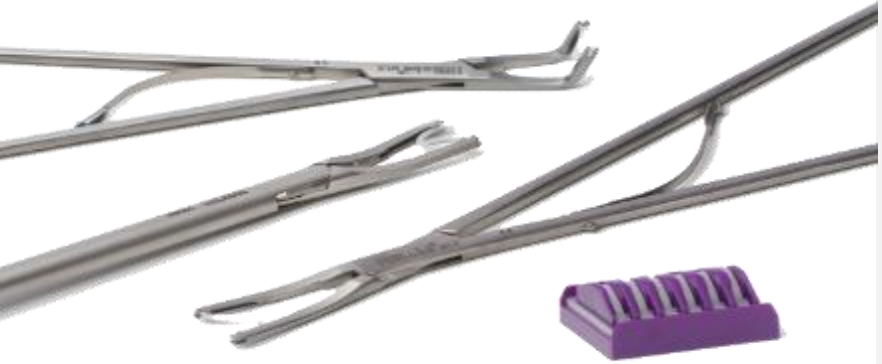
1. Idata research: United States Market Report Suite for Laparoscopic Devices, 2017

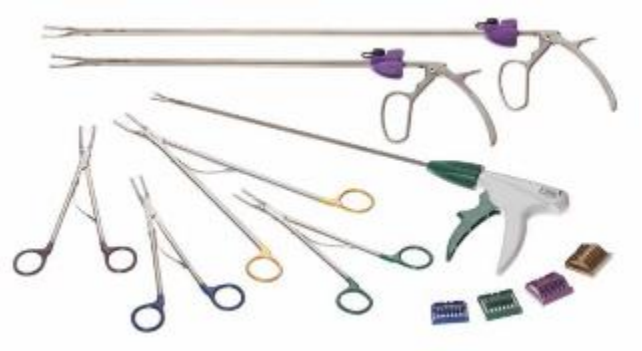
Creating a Suite of Minimally Invasive Surgical Products



Teleflex®

Weck® Hem-o-lok® Polymer Ligation Systems





Product Description

Weck Hem-o-lok® polymer ligation clips are designed for cool ligation, lasting security and fast, efficient delivery – secure from the cartridge to the applier and on the vessel. The Weck Hem-o-lok polymer ligation system unique design offers:

- A flexible hinge that keeps the clip firmly seated in the applier jaws
- Tactile feedback that confirms jaw seating and secure vessel placement
- Distal locking clip to signal closure

Catheter Complications: Antimicrobial Technology

Top Market Trends

- Pressures on healthcare funding linked to patient outcomes
- Increasing awareness of infection and thrombosis driving penalties and therapy costs
- Increasing awareness of CLABSI issues with PICC lines

Growth Strategy

- Portfolio enhancement around - Right Line, Right Patient, Right Time™
- Data driven, health economic selling and consultative approaches
- Leverage tip placement navigation technology
- Drive standardization through our coating and kitting strategies
- Investment and launch of several clinical education and professional education programs

Teleflex®

Arrowg+ard Blue Advance™ PICC

Product Description

Pressure-injectable Arrowg+ard Blue Advance™ PICCs with Chlorag+ard® Technology are the world's first PICCs in the intravascular catheter marketplace with both broad-spectrum antimicrobial and antithrombogenic protection. Extra- and intraluminal protection helps reduce the colonization of some pathogens responsible for causing central line–associated bloodstream infections (CLABSIs).[1,2] Chlorhexidine helps to reduce thrombus accumulation on the catheter surfaces.[1] The Arrowg+ard Blue Advance PICC is available in a complete portfolio of single-, double- and triple-lumen formats and related kits.

1. As compared to uncoated PICCs, intravascular ovine model inoculated with *Staph aureus*. No correlation between these testing methods and clinical outcome has currently been ascertained.
2. In vitro data on file 2010. No correlation between these testing methods and clinical outcome has currently been ascertained.

Teleflex®

Appendix B:

GAAP to Non-GAAP Reconciliations

Note on Non-GAAP Financial Measures

The presentation to which these appendices are attached and the following appendices include, among other things, tables reconciling the following applicable non-GAAP financial measures to the most comparable GAAP financial measure:

- ***Constant currency revenue growth*.** This measure excludes the impact of translating the results of international subsidiaries at different currency exchange rates from period to period.
- ***Organic constant currency revenue growth*.** This measure excludes (i) the impact of translating the results of international subsidiaries at different currency exchange rates from period to period; and (ii) the results of acquired businesses (other than acquired distributors) for the first 12 months following the acquisition date.
- ***Adjusted gross profit and margin*.** These measures exclude, depending on the period presented, the impact of (i) restructuring, restructuring related and impairment items, (ii) acquisition, integration and divestiture related items and (iii) other items identified in note (C) to the reconciliation tables appearing in Appendix B.
- ***Adjusted operating profit and margin*.** These measures exclude, depending on the period presented, (i) the impact of restructuring, restructuring related and impairment items; (ii) acquisitions, integration and divestiture related items; (iii) other items identified in note (C) to the reconciliation tables appearing in Appendix C.
- ***Adjusted diluted earnings per share*.** This measure excludes, depending on the period presented, the impact of (i) restructuring, restructuring related and impairment items; (ii) acquisition, integration and divestiture related items; (iii) other items identified in note (C) to each of the reconciliation tables appearing in Appendices D and E; (iv) amortization of the debt discount on the Company's previously outstanding convertible notes; (v) intangible amortization expense; (vi) loss on extinguishment of debt; and (vii) tax adjustments identified in note (G) to the reconciliation tables appearing in Appendices D and E. In addition, the calculation of diluted shares within adjusted earnings per share for the 2017 periods gives effect to the anti-dilutive impact of the Company's previously outstanding convertible note hedge agreements, which reduced the potential economic dilution that otherwise would have occurred upon conversion of the Company's senior subordinated convertible notes (under GAAP, the anti-dilutive impact of the convertible note hedge agreements is not reflected in diluted shares).

Non-GAAP Adjustments

The following is an explanation of certain of the adjustments that are applied with respect to one or more of the non-GAAP financial measures that appear in the presentation to which these appendices are attached:

Restructuring, restructuring related and impairment items. Restructuring programs involve discrete initiatives designed to, among other things, consolidate or relocate manufacturing, administrative and other facilities, outsource distribution operations, improve operating efficiencies and integrate acquired businesses. Depending on the specific restructuring program involved, our restructuring charges may include employee termination, contract termination, facility closure, employee relocation, equipment relocation, outplacement and other exit costs associated with the restructuring program. Restructuring related charges are directly related to our restructuring programs and consist of facility consolidation costs, including accelerated depreciation expense related to facility closures, costs to transfer manufacturing operations between locations, and retention bonuses offered to certain employees as an incentive for them to remain with our company after completion of the restructuring program. Impairment charges occur if, as a result of periodic impairment testing or due to events or changes in circumstances, we determine that the carrying value of an asset exceeds its fair value. Impairment charges do not directly affect our liquidity, but could have a material adverse effect on our reported financial results.

Acquisition, integration and divestiture related items. Acquisition and integration expenses are incremental charges, other than restructuring or restructuring related expenses, that are directly related to specific business or asset acquisition transactions. These charges may include, among other things, professional, consulting and other fees; systems integration costs; legal entity restructuring expense; inventory step-up amortization (amortization, through cost of goods sold, of the increase in fair value of inventory resulting from a fair value calculation as of the acquisition date); fair value adjustments to contingent consideration liabilities; and bridge loan facility and backstop financing fees in connection with loan facilities that ultimately were not utilized. Divestiture related activities involve specific business or asset sales. Depending primarily on the terms of the divestiture transaction, the carrying value of the divested business or assets on our financial statements and other costs we incur as a direct result of the divestiture transaction, we may recognize a gain or loss in connection with the divestiture related activities.

Other items. These are discrete items that occur sporadically and can affect period-to-period comparisons.

Amortization of debt discount on convertible notes. When we sold $400 million principal amount of our 3.875% convertible notes (the “convertible notes”) in 2010, we allocated the proceeds between the liability and equity components of the debt, in accordance with GAAP. As a result, the $83.7 million difference between the proceeds of the sale of the convertible notes and the liability component of the debt constituted a debt discount that was to be amortized to interest expense over the approximately seven-year term of the convertible notes, which significantly increased the amount we recorded as interest expense attributable to the convertible notes. The amount of the amortization of the debt discount was reduced as a result of our repurchases of convertible notes in 2016 and 2017 and redemptions of the convertible notes by holders of the notes, although we continued to amortize the remaining portion of the debt discount to interest expense until August 2017, when all remaining convertible notes were either converted or matured.

Intangible amortization expense. Certain intangible assets, including customer relationships, intellectual property, distribution rights, trade names and non-competition agreements, initially are recorded at historical cost and then amortized over their respective estimated useful lives. The amount of such amortization can vary from period to period as a result of, among other things, business or asset acquisitions or dispositions.

Loss on extinguishment of debt. In connection with debt refinancings, debt repayments, repurchases of convertible notes and redemptions of convertible notes, outstanding indebtedness is extinguished. These events, which have occurred from time to time on an irregular basis, have resulted in losses reflecting, among other things, unamortized debt issuance costs, as well as debt prepayment fees and premiums (including conversion premiums resulting from conversion of convertible securities).

Tax adjustments. These adjustments represent the impact of the expiration of applicable statutes of limitations for prior year returns, the resolution of audits, the filing of amended returns with respect to prior tax years and/or tax law changes affecting our deferred tax liability.

Adjusted diluted shares. Adjusted diluted shares are calculated by giving effect to the anti-dilutive impact of the Company’s convertible note hedge agreements, which reduced the potential economic dilution that otherwise would have occurred upon conversion of the Company's convertible notes. Under GAAP, the anti-dilutive impact of the convertible note hedge agreements is not reflected in the weighted average number of diluted shares.

(A) Restructuring, restructuring related and impairment items - In 2014 and 2015 the majority of these charges were related to facility consolidations. In 2016, these charges include; (i) charges related to facility consolidations, (ii) a pre-tax, non-cash $41.0 million impairment charge in connection with discontinuation of an in-process research and development project; (iii) $2.4 million in pre-tax, non-cash impairment charges related to two properties, one of which was classified as an asset held for sale. In 2017, the majority of these charges were related to facility consolidations. For the twelve months ended December 31, 2017 and December 31, 2018, pre-tax impairment charges were $0 million and $19.1 million, respectively.

(B) Acquisition, integration and divestiture related items - In 2014 and 2015, the majority of these charges were related to contingent consideration liabilities, somewhat offset by acquisition costs. In 2016, the majority of these charges included reversals related to contingent consideration liabilities, including $8.3 million related to the discontinuation of an in-process research and development project, and the gain on a sale of assets, somewhat offset by acquisition costs. . For the twelve months ended December 31, 2017, these charges were primarily related to our acquisitions of Vascular Solutions and NeoTract, as well as contingent consideration liabilities. For the twelve months ended December 31, 2018, these charges were primarily related to contingent consideration liabilities and our acquisition of NeoTract. There were no divestiture related activities for the periods presented.

(C) Other items - In 2016, the majority of these charges were related to relabeling costs and costs associated with a facility that was exited. For the twelve months ended December 31, 2017, other items included both gains and losses associated with litigation settlements, the reversal of previously recognized income due to distributor acquisitions related to Vascular Solutions, the reversal of previously recognized income due to our distributor to direct sales conversion in China, and relabeling costs. For the twelve months ended December 31, 2018, other items included the reversal of previously recognized income due to distributor acquisitions related to Vascular Solutions, losses associated with settlement of ligation relating to an intellectual property matter, expenses associated with a franchise tax audit, and relabeling costs. Other items for the twelve months ended December 31, 2018 included a charge we incurred, as a result of the Tax Cuts and Jobs Act ("TCJA"), on our consolidated operations. During the second quarter of 2018, we identified provisions of the TCJA that could have adverse consequences due to our organizational structure. We implemented certain changes in the organizational structure (with, pursuant to tax law, retroactive impact back to 2017), as a result of which, we incurred a $1.9 million net worth tax in a foreign jurisdiction with respect to the 2017 tax year. Because the decision to make the change resulting in the net worth tax occurred in the second quarter of 2018, and as permitted under GAAP, we recorded the net worth tax charge in 2018, and the adjustment eliminating the charge is included in the table for the year ended December 31, 2018
