MAIN Strategy Produces Differentiated Returns

Enhanced Value Proposition - Three Ways to Win are Better Than One

1. Sustain and Grow Dividends

- Efficient operating structure provides operating leverage to grow Distributable Net Investment Income (DNII)⁽¹⁾, and dividends paid, as investment portfolio and total investment income grow
- 105% increase in monthly dividends from \$0.33 per share paid in Q4 2007 to declared dividends of \$0.675 per share for Q1 2023
- Never decreased regular monthly dividends (including through 2008/2009 recession and 2020/2021 COVID-19 pandemic)
- Paid or declared \$35.795 per share in total dividends since October 2007 IPO at \$15.00 per share (\$31.305 per share in regular dividends and \$4.49 per share in supplemental dividends)
- Multi-faceted investment strategy supports growth of dividends over various cycles and markets

2. Meaningfully Grow Net Asset Value (NAV) Per Share

- \$12.85 at December 31, 2007 to \$25.94 at September 30, 2022 – 102% growth; CAGR of 4.9%
- Represents incremental economic return to investors beyond dividends
- MAIN's debt-focused peers (which comprises most BDCs) cannot generate NAV per share growth through the cycles
- Unrealized appreciation is a good proxy for future dividend growth without the need for additional capital through growing portfolio dividend income and periodic harvesting of realized gains from equity investments
- Ability to grow NAV per share provides opportunity for MAIN stock share price appreciation and additional shareholder returns

3. Supplement Growth in DNII⁽¹⁾ with Periodic Realized Gains

- LMM equity component of investment strategy provides opportunity for meaningful realized gains (analogous to PIK income on debt investments from cash flow perspective, but more tax efficient and without cap on upside)
- Realized gains validate the quality of MAIN's unrealized appreciation
- Realized gains can be retained for future reinvestment due to MAIN's unique tax structure or paid to shareholders as dividends

(1) See reconciliation of DNII per share to Net Investment Income per share on page 38 and Non-GAAP Information disclosures on page 48 of this presentation

Historical Monthly Dividends, NAV and DNII⁽¹⁾ Per Share

MAIN's unique focus on equity investments in the LMM provides the opportunity for significant NAV per share growth

MAIN's efficient operating structure provides significant operating leverage, greater dividends and greater overall returns for our shareholders

- In addition to the monthly dividends above, \$4.49 per share of supplemental dividends have been paid or declared since 2007 IPO⁽²⁾
- Annual return on equity averaging approximately 13.7% from 2010 through the third quarter of 2022

(1) See reconciliation of DNII per share to Net Investment Income per share on page 38 and Non-GAAP Information disclosures on page 48 of this presentation

(2) Includes dividends paid or declared as of November 4, 2022

(2) Weighted-average effective yield is calculated using the applicable interest rate as of September 30, 2022 and includes amortization of deferred debt origination fees and accretion of original issue discount, but excludes fees payable upon repayment of the debt instruments and any debt investments on non-accrual status

Stable, Long-Term Leverage – Significant Unused Capacity

MAIN maintains a conservative capital structure, with limited overall leverage and low cost, long-term debt

Capital structure is designed to correlate to and complement the expected duration and fixed/floating rate nature of investment portfolio assets

(1) As of September 30, 2022, MAIN's Credit Facility had \$920.0 million in total commitments with an accordion feature with the right to request an increase up to \$1.4 billion; borrowings under this facility are available to provide additional liquidity for investment and operational activities

(2) Credit Facility's rate reflects the rate based on SOFR as of September 30, 2022 and effective as of the contractual reset date as of October 1, 2022

(3) MAIN's Credit Facility is fully revolving until August 2026, with a maturity date in August 2027

Long-term Maturity of Debt Obligations

MAIN's conservative capital structure provides long-term access to attractively-priced and structured debt facilities

- Allows for investments in assets with long-term holding periods / illiquid positions and greater yields and overall returns
- Provides downside protection and liquidity through economic cycles
- Allows MAIN to be opportunistic during periods of economic uncertainty

(1) As of September 30, 2022, MAIN's Credit Facility had \$920.0 million in total commitments with an accordion feature with the right to request an increase up to \$1.4 billion; borrowings under this facility are available to provide additional liquidity for investment and operational activities; MAIN's Credit Facility is fully revolving until August 2026, with a maturity date thereafter in August 2027

(2) Issued in November 2017; redeemable at MAIN's option at any time, subject to certain make-whole provisions

(3) Issued in April 2019 with follow-on issuances in December 2019 and July 2020; redeemable at MAIN's option at any time, subject to certain make-whole provisions

(4) Issued in January 2021; with a follow-on issuance in October 2021; redeemable at MAIN's option at any time, subject to certain make-whole provisions

Interest Rate Impact and Sensitivity

MAIN's financial results are subject to impact from changes in interest rates. MAIN's capital structure includes a majority of fixed rate debt obligations, while MAIN's investment portfolio includes a majority of floating rate debt investments with minimum interest rate floors

- 73% of MAIN's outstanding debt obligations have fixed interest rates⁽⁵⁾, limiting the increase in interest expense
- 76% of MAIN's debt investments bear interest at floating rates⁽⁵⁾, the majority of which contain contractual minimum index rates, or "interest rate floors" (weighted-average floor of approximately 105 basis points)⁽⁶⁾
- Provides MAIN the opportunity to achieve significant increases in net investment income if market interest rates increase, but also results in reductions to net investment income if market interest rates decrease

The following table illustrates the approximate annual changes in the components of MAIN's net investment income due to hypothetical increases (decreases) in interest rates⁽¹⁾⁽²⁾ (dollars in thousands, except per share data):

Basis Point Increase (Decrease) in Interest Rate	Increase (Decrease) in Interest Income	(Increase) Decrease in Interest Expense ⁽³⁾	Increase (Decrease) in Net Investment Income	Increase (Decrease) in Net Investment Income per Share ⁽⁴⁾

- (1) Assumes no changes in the portfolio investments, outstanding Credit Facility borrowings or other debt obligations existing as of September 30, 2022
- (2) Assumes that all LIBOR, SOFR and prime rates would change effective immediately on the first day of the period; however, the actual contractual index rate reset dates for our debt investments vary in future periods generally on either a monthly or quarterly basis across both the investments resulting in a delay in the realization of the increases or decreases in interest income
- (3) The hypothetical (increase) decrease in interest expense would be impacted by the changes in the amount of debt outstanding under our Credit Facility, with interest expense (increasing) decreasing as the debt outstanding under our Credit Facility increases (decreases)
- (4) Per share amount is calculated using shares outstanding as of September 30, 2022
- (5) As of September 30, 2022, based on par
- (6) Weighted-average interest rate floor calculated based on debt principal balances as of September 30, 2022

Although we believe that this analysis is indicative of the impact of interest rate changes to our net investment income as of September 30, 2022, the analysis does not take into consideration future changes in the credit market, credit quality or other business or economic developments that could affect our net investment income. Accordingly, we can offer no assurances that actual results would not differ materially from the analysis above.

Non-GAAP Information

Distributable net investment income is net investment income as determined in accordance with U.S. Generally Accepted Accounting Principles, or U.S. GAAP, excluding the impacts of non-cash compensation expenses (as defined below). MAIN believes presenting distributable net investment income and the related per share amounts is useful and appropriate supplemental disclosure for analyzing our financial performance since non-cash compensation expenses do not result in a net cash impact to Main Street upon settlement. However, distributable net investment income is a non-U.S. GAAP measure and should not be considered as a replacement for net investment income or other earnings measures presented in accordance with U.S. GAAP and should be reviewed only in connection with such U.S. GAAP measures in analyzing MAIN's financial performance.

Non-cash compensation expenses consist of (i) share-based compensation and (ii) deferred compensation expense or benefit, both of which are non-cash in nature. Share-based compensation does not require settlement in cash. Deferred compensation expense or benefit does not result in a net cash impact to Main Street upon settlement. The appreciation (depreciation) in the fair value of deferred compensation plan assets is reflected in Main Street's Consolidated Statements of Operations as unrealized appreciation (depreciation) and an increase (decrease) in compensation expense, respectively. Main Street believes presenting non-cash compensation expenses is useful and appropriate supplemental disclosure for analyzing its financial performance since non-cash compensation expenses do not result in a net cash impact to Main Street upon settlement. However, non-cash compensation expenses are non-U.S. GAAP measures and should not be considered as a replacement for compensation expenses, total expenses or other earnings measures presented in accordance with U.S. GAAP and should be reviewed only in connection with such U.S. GAAP measures in analyzing Main Street's financial performance.

Net Debt to NAV Ratio is calculated as the Debt to NAV Ratio as determined in accordance with U.S. GAAP, except that total debt is reduced by cash and cash equivalents. The **Non-SBIC Debt to NAV Ratio** is calculated in the same manner as the Debt to NAV Ratio, except that outstanding SBIC debentures are excluded from the debt pursuant to an exemptive order MAIN received from the Securities and Exchange Commission. MAIN believes presenting the Net Debt to NAV Ratio is useful and appropriate supplemental disclosure for analyzing its financial position and leverage. MAIN believes presenting the Non-SBIC Debt to NAV Ratio is useful and appropriate supplemental disclosure because Main Street, a business development company, is permitted to exclude such borrowings from its regulatory asset coverage ratio calculation pursuant to an exemptive order received from the Securities and Exchange Commission. However, the Net Debt to NAV Ratio and the Non-SBIC Debt to NAV Ratio are non-U.S. GAAP measures and should not be considered as replacements for the Debt to NAV Ratio and other financial measures presented in accordance with U.S. GAAP. Instead, the Net Debt to NAV Ratio and the Non-SBIC Debt to NAV Ratio should be reviewed only in connection with such U.S. GAAP measures in analyzing MAIN's financial position.
