## Allowance for Credit Losses - Q3 2023 Movement

## ACL Movement:

- Moody's August 2023 baseline scenario continues to show a resilient economy that avoids a recession
- Economic scenario change is driven by variables that impact the P.R. consumer loan portfolios
- Higher qualitative reserves mainly due to increasing trend in NCOs for unsecured personal loans
- New U.S. CRE model is based on more granular regional performance
- Portfolio changes are mainly driven by changes in the credit quality of consumer loans and higher loan volumes

## Economic Scenarios:

- Baseline scenario is assigned the highest probability, followed by the S3 (pessimistic) scenario
- Increase in 2023 forecasted GDP growth for P.R. due to revision of the P.R. Government Economic Activity Index
- Unemployment rate for P.R. near historical lows
- 2023 U.S. forecast for GDP growth is being aided by rising consumer and government spending while the unemployment rate remains consistent with the previous quarter
- The reduction in 2024 U.S. GDP growth reflects the continued impact of the Fed's monetary policy
