HOOKIPA PHARMA

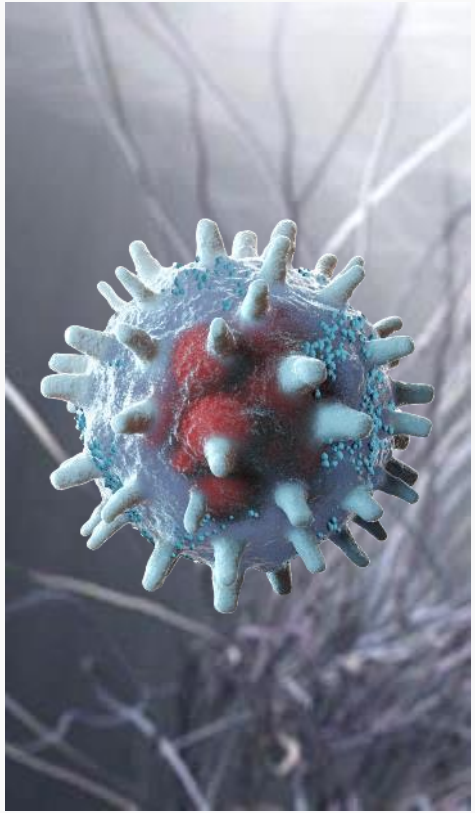
Supercharging Immunotherapy

May 2023

Disclaimer

This presentation and other related material may contain a number of "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995, as amended, including statements regarding HOOKIPA's expectation about any or all of the following: (i) the success, cost and timing of HOOKIPA's product development activities and clinical trials; (ii) the timing, scope or likelihood of regulatory filings and approvals, including timing of Investigational New Drug Application and Biological Licensing Application filings for HOOKIPA's current and future product candidates, and final U.S. Food and Drug Administration, European Medicines Agency or other foreign regulatory authority approval of HOOKIPA's current and future product candidates; (iii) HOOKIPA's ability to develop and advance its current product candidates and programs into, and successfully complete, clinical studies; (iv) the potential benefits of and HOOKIPA's ability to maintain its collaboration with Gilead Sciences, Inc. ("Gilead"), F. Hoffmann-La Roche Ltd and Hoffmann-La Roche Inc. ("Roche") and establish or maintain future collaborations or strategic relationships or obtain additional funding; (v) risks relating to business interruptions resulting from the coronavirus (COVID-19) disease outbreak or similar public health crises and other matters that could affect the sufficiency of existing cash to fund operations and HOOKIPA's ability to achieve the milestones under the agreement with Gilead and Roche. Forward-looking statements can be identified by terms such as "believes," "expects," "plans," "potential," "would" or similar expressions and the negative of those terms HOOKIPA has based these forward-looking statements largely on its current expectations and projections about future events and financial trends that it believes may affect its business, financial condition and results of operations. Although HOOKIPA believes that such statements are based on reasonable assumptions, forward-looking statements are neither promises nor guarantees and they are necessarily subject to a high degree of uncertainty and risk. Because forward-looking statements are inherently subject to risks and uncertainties, some of which cannot be predicted or quantified and some of which are beyond HOOKIPA's control, you should not rely on these forward-looking statements as predictions of future events. These risks and uncertainties include, among others: outcomes of HOOKIPA's planned clinical trials and studies may not be favorable; that one or more of HOOKIPA's product candidate programs will not proceed as planned for technical, scientific or commercial reasons; availability and timing of results from preclinical studies and clinical trials; uncertainty about regulatory approval to conduct clinical trials or to market a products; uncertainties regarding intellectual property protection; and those risk and uncertainties described under the heading "Risk Factors" in HOOKIPA's Form 10-Q for the quarter ended March 31, 2023 filed with the U.S. Securities and Exchange Commission, and in any other subsequent filings made by HOOKIPA with the U.S. Securities and Exchange Commission, which are available at www.sec.gov. Existing and prospectus investors are cautioned not to place undue reliance on these forward-looking statements, which speak only as of the date they are made. HOOKIPA disclaims any obligation or undertaking to update or revise any forward-looking statements contained in this presentation, other than to the extent required by law.

Directing the Power of the Immune System Against Serious Diseases



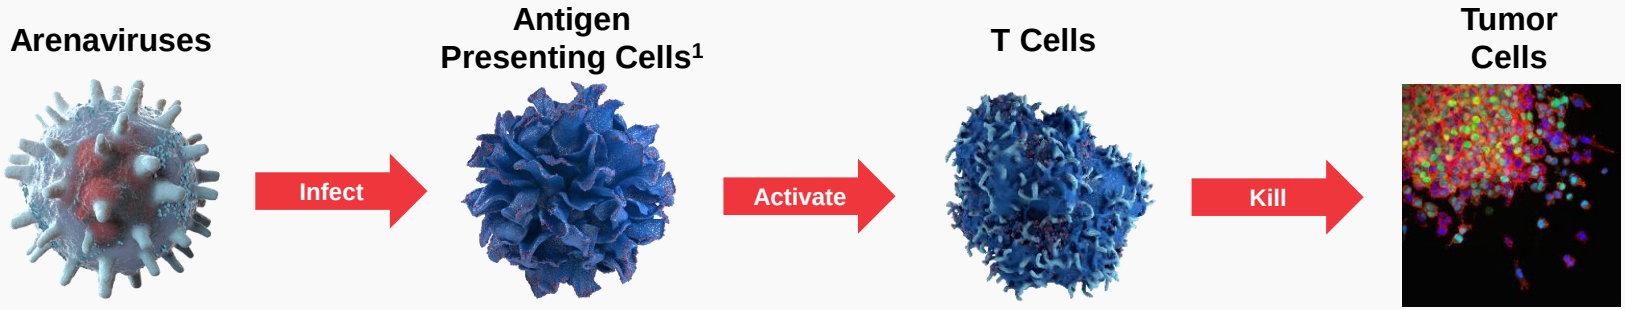
Vision A world in which cancers are chronically managed or eradicated

Mission Advancing the field of immunotherapy by using a novel, arenavirus-based antigen delivery system

Strategy Targeted T cell induction and amplification as a backbone to immunotherapies lacking T cells at the tumor to be effective

Arenaviruses Naturally Target Immune Cells to Activate T Cells, Using This Mechanism to Direct T Cells to Specifically Kill Malignant Cells

Arenavirus Vector Mode of Action

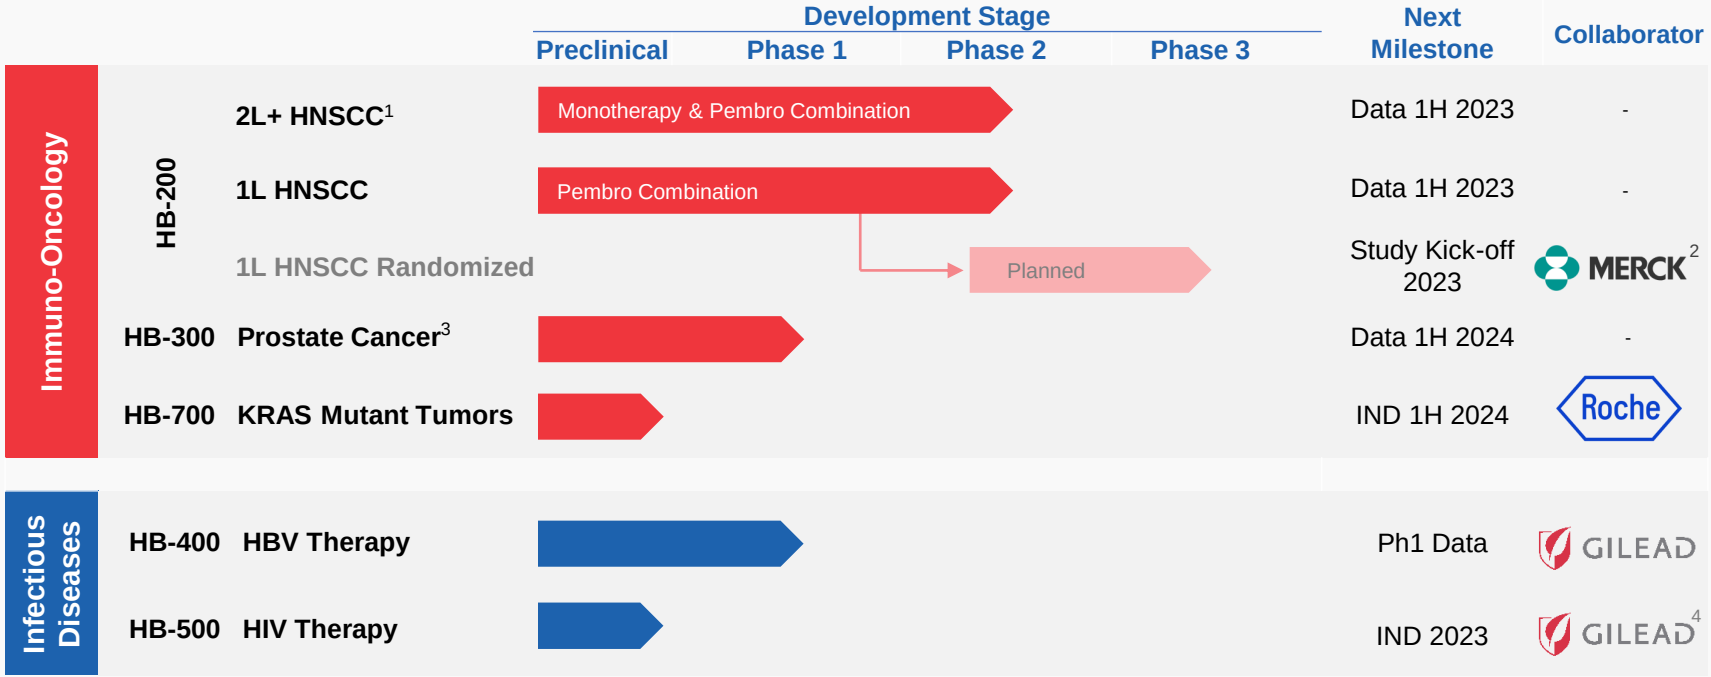


Potent characteristics of arenavirus

- In vivo (IV administration)
- Off-the-shelf
- Repeat administration
- Well tolerated, safely combinable with other IO agents

[1]Antigen Presenting Cells include dendritic cells and macrophages.

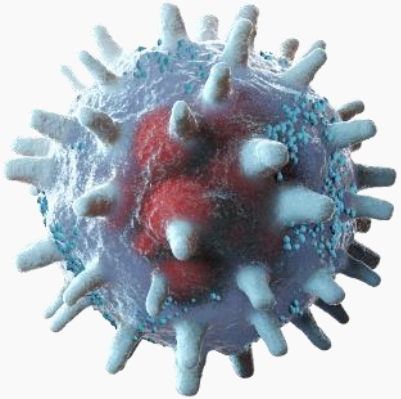
Diverse Oncology Pipeline, Upside from Partnered Infectious Disease Programs



HNSCC, Head and Neck Squamous Cell Carcinoma; 1L/2L+, line of therapy; HIV, Human Immunodeficiency Virus; HBV, Hepatitis B Virus

[1]ClinicalTrials.gov: NCT04180215; [2]Clinical supply agreement for pembrolizumab. Phase 2 1L randomized trial to be informed by non-randomized ongoing Phase 2 1L data; [3]ClinicalTrials.gov: NCT 05553639; [4]HIV Therapy: Upon completion of Phase 1b study, Gilead has exclusive right for further development.

HB-200 Monotherapy Activity in Recurrent/Metastatic HPV16^{+} HNSCC Patients Progressed on Standard of Care



- **Monotherapy results**
  - Phase 1 anti-tumor activity
  - Strong translational data
  - Favorable safety & tolerability profile

- **Phase 2 ongoing for HB-200 in combination with pembrolizumab**
  - FDA Fast Track Designation
  - Clinical supply agreement with Merck & Co. for pembrolizumab

HB-200 Program in HPV16^{+} Cancers

HB-200 Market
Large Unmet Medical Need to Treat HPV16⁺ Head & Neck Cancers

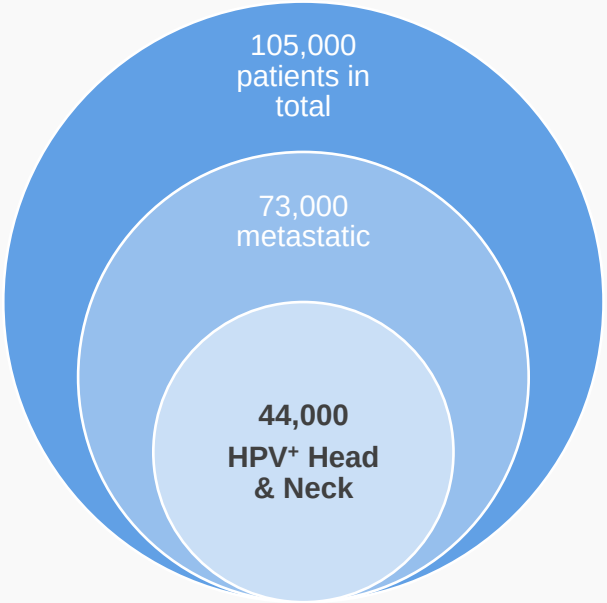
The HPV⁺ Cancer Challenge

- 60% of all head & neck cancers (HNSCC) are HPV⁺
- Poor outcomes with SOC (CPI), e.g. Pembrolizumab:

Endpoint	1L	2L
ORR	19 - 23%	16%
mPFS (months)	3.2	2.0 - 2.1
mOS (months)	12.3	7.5 - 8.4

- >80% of patients are refractory to SOC/CPI
- HB-200 goal: ORR of SOC x 2

Growing HPV⁺ Cancer Market
(Expected 2030 Patient Incidence)



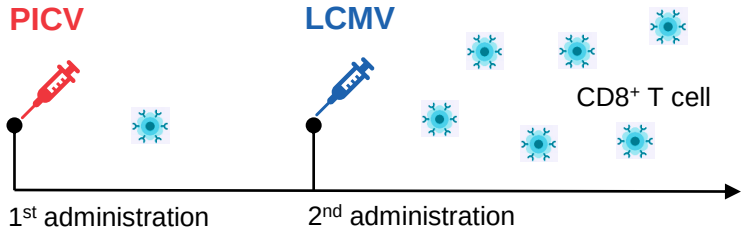
SOC, standard of care; HNSCC, head and neck squamous cell carcinoma. https://gco.iarc.fr/tomorrow/en/dataviz/tables; https://seer.cancer.gov/statfacts/html/oralcav.html; https://www.cdc.gov/cancer/hpv/statistics/cases.htm; https://gynoncrp.biomedcentral.com/articles/10.1186/s40661-017-0047-8; https://pubmed.ncbi.nlm.nih.gov/22966247/; https://pubmed.ncbi.nlm.nih.gov/27838135/; https://touchoncology.com/wp-content/uploads/sites/2/2016/06/private_articles_22352_pdf_ Bevacizumab-in-the-Treatment-of-Cervical-Cancer-%E2%80%93-Current-Evidence-and-Next-Steps_0.pdf; https://clincancerres.aacrjournals.org/content/clincanres/early/2020/01/28/1078-0432.CCR-19-2962.full.pdf; https://www.keytrudahcp.com/efficacy/hnscc-first-line-monotherapy#clinical-findings-from-keynote-048

Novel Arenavirus-based Product Candidate HB-200 Has Ideal Profile to Treat HPV16+ Head & Neck Squamous Cell Carcinoma

HB-200's Potential Solution

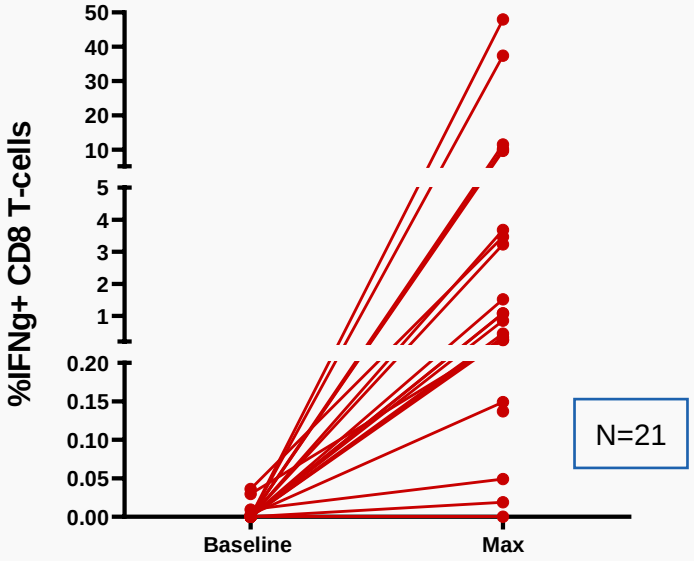
- Intravenous delivery (i.v.)
- 2 different replicating arenaviral vectors encoding the same non-oncogenic HPV16+ E6/E7 fusion antigens
  - HB-201 = Lymphocytic Choriomeningitis Virus (LCMV) carrying E6/E7
  - HB-202 = Pichinde Virus (PICV) carrying E6/E7
- Phase 2 expansion cohorts ongoing

Alternating 2-Vector Therapy



Alternating 2-vector therapy focuses amplification on the target antigen since PICV and LCMV have different backbones

HOOKIPA's Arenaviral Platform Ideally Suited to Induce Strong Specific CD8+ T Cell Responses



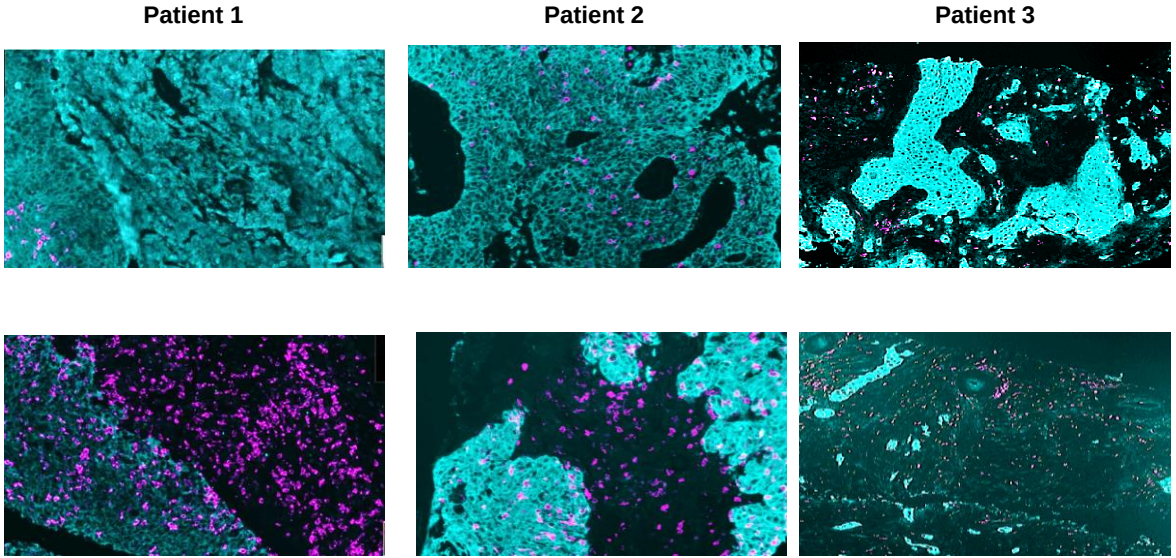
Direct measurement without prior in vitro expansion of cells; majority of patients show peak responses 2-3 weeks post first administration.

Fast and durable induction of active tumor-specific T cell responses in nearly all patients:

- ~80% of patients have measurable tumor specific T cell response after first administration
- ~90% of patients have measurable T cell response after second, third and fourth administrations
- In 57% of patients HB-202/201 breaks the above 1% threshold of tumor specific systemic CD8+ T cells

Phase 1: HB-200 CD8+ T Cells Traffic Tumors

50% of biopsied patients show Tumor Infiltrating Lymphocytes (TILs)[1], i.e. CD8+ T cells infiltrating tumors



Staining Legend:
CD8+ T cells | Tumor

[1]Analysis of all available paired (pre- and post treatment) tumor biopsies from patients treated with HB-201 or HB-202/HB-201 IV Q3W interval (N=6).

Phase 1 HB-200 Tolerability Profile: Ideal Candidate for Combination Therapy

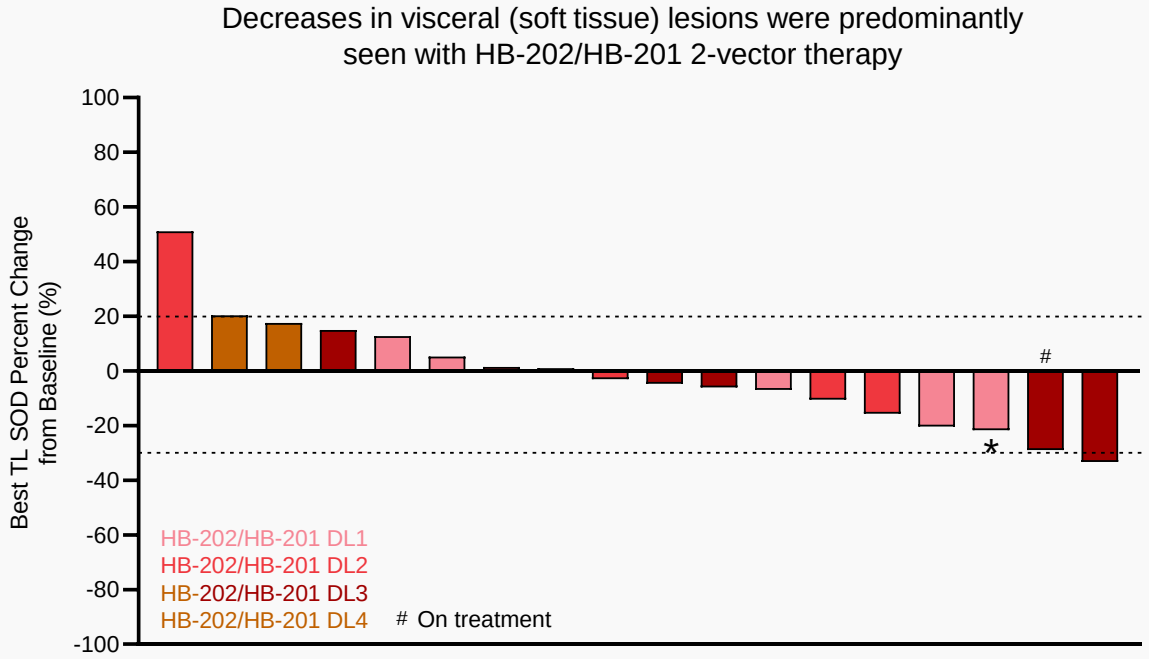
All Groups, All Cohorts (N=68)	Treatment Related AEs	All AEs
Any event	HB-201: 43 (63%) HB-202: 21 (75%)	67 (99%)
Grade ≥3	6 (9%)	29 (43%)
Serious	2 (3%)	17 (25%)
Leading to dose reduction	1 (2%)	1 (2%)
Leading to discontinuation	2 (3%)	6 (9%)
Deaths	0	3 (4%)

Data as of 31 Mar 2022. Preliminary Data: Includes unmonitored and unverified data based on current EDC data or data provided by Investigators. Data is subject to change.

- Median 3 prior lines of treatment (range 1-11)
- Most common AE: flu-like symptoms, lasting 24-72 hours; no recurrence following additional administrations
- No treatment-related deaths
- Grade 4:
  - Encephalopathy* (HB-201, also reported as serious, dose discontinuation)
  - AST increase* and Grade 3 febrile neutropenia (HB-202, also reported as serious, dose discontinuation)

**Events of Grade 4 encephalopathy and Grade 4 AST increase have been considered dose-limiting toxicities, leading to treatment discontinuation.*

Phase 1 HB-200 Anti-Tumor Activity: 56% of Target Lesion Shrinkage



Data cut-off: March 31, 2022. Best overall response indicates the patients who have a RECIST v1.1 determined stable disease or partial response. DL, dose level; TL, target lesion; SOD; sum of diameter.

**Pembrolizumab was added to the HB-200 therapy upon disease progression at the investigators' discretion. Data shown here excludes changes after the addition of pembrolizumab.*

Phase 1 80% DCR in 2-Vector RP2D Group Is Competitive in a Post-SOC Population When Compared to Earlier Line CPIs

	HB-200 Phase 1 Patients: Median 3 Prior Lines of Therapy		Earlier Line Checkpoint Inhibitors: L2+ Patients	
	All HNSCC Q3W IV Patients	HB-202/HB-201 @RP2D	Nivolumab[1] (HPV+)	Pembrolizumab[1] (HPV+)
N, evaluable (≥1 scan)	**34**	**5**		
ORR, n (%)	**3 (8.8%)**	**1 (20%)**	**13%[2]** (HPV+: 16%[2])	**18%[3]** (HPV+: 24%[3])
DCR, n (%)	**22 (65%)**	**4 (80%)**	**HPV+: 40%[2]**	**31%[3]** (HPV+: 32%[3])
PFS, median (mo)	**2.56**	**Unreached**	**2.0[2]**	

Data cut-off: March 31, 2022.

DCR, disease control rate; RP2D, recommended Phase 2 dose; SOC, standard of care; L2+, line of therapy, ORR, objective response rate; PFS, progression-free survival.

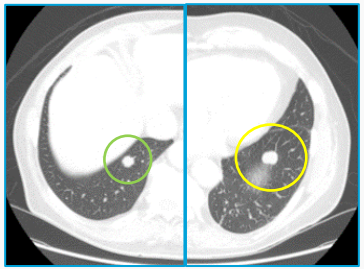
[1]Historical, not head-to-head data comparisons; [2]Ferris et al, NEJM 2016; 375: 1856-1867; [3]Mehra R et al. British J of Cancer. 2018; 119:153-159.

HB-200 Metastatic HNSCC Patient on Dose Level 3 Demonstrates Strong Tumor Control Response After Progression on Pembro

- 65-year-old male diagnosed with Stage III oropharynx / larynx cancer in 2019
- 3 prior therapies to HB-202/HB-201

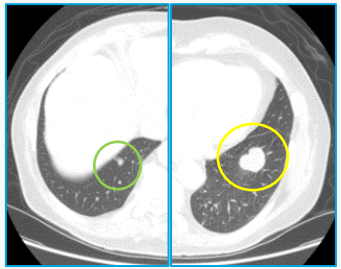
Prior to HB-200

Prior to starting 1L Pembrolizumab+TKI



Dec. 2020:
Metastatic 1L Pembrolizumab + TKI started

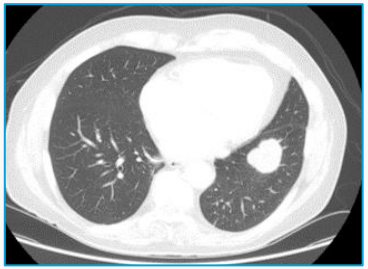
Confirmed progression



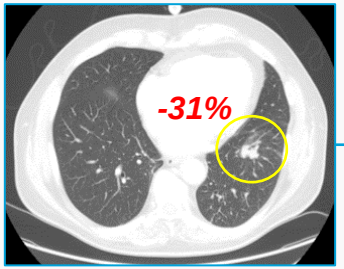
Mar. 2021:
Pembrolizumab + TKI confirmed progression. One lesion responded; one lesion progressed

HB-200 Treatment

HB-202/HB-201 alone therapy: "Refractory" lesion responds



Apr. 2021: **Baseline CT**
Patient starts HB-202/ HB-201 vector-only therapy



Dec. 2021:
4th scan
Confirmed PR -31%

After 5th scan in Jan. 2022 (-33%), patient came off study to pursue resection of lung metastasis in Mar. 2022

1L, line of treatment; POD, progression of disease; uPR, unconfirmed partial response.

HB-200 Phase 2 Clinical Development Strategy in 1st and 2nd Line HPV16+ HNSCC Patients

Phase 1 part (monotherapy)

Strong tumor-specific T cell responses and promising early signs of clinical efficacy

Phase 2 part[1] (combinations)

1st line HPV16+ HNSCC

HB-200 + Pembrolizumab

Current SOC efficacy[2]:

19-23% ORR
47-53% DCR

2nd line HPV16+ HNSCC

HB-200 + Pembrolizumab

(other potential combinations under discussion)

Current SOC efficacy[3]:

15% ORR

1H 2023 data

Path to registration

Randomized Phase 2

MERCK Supply agreement

Confirmatory Phase 2b

Potential fast-track for patients who have failed prior lines of treatment

[1]Phase 2 part of Phase1/2 trial; monotherapy part is also ongoing for the HB-202/201 cohorts and a decision to progress the program in the post SOC setting as a monotherapy will be determined in 1H2023; [2]Pembro alone 1st line, Burtness B et al. Lancet 2019; [3]Pembro alone 2nd line, Cohen et al. Lancet 2019.

Earlier I/O Programs

Arenavirus Platform Can Target a Broad Range of Antigen Types

Plug & Play system to express variety of known and novel antigens

- Drug Master File cleared by FDA in July 2022 -

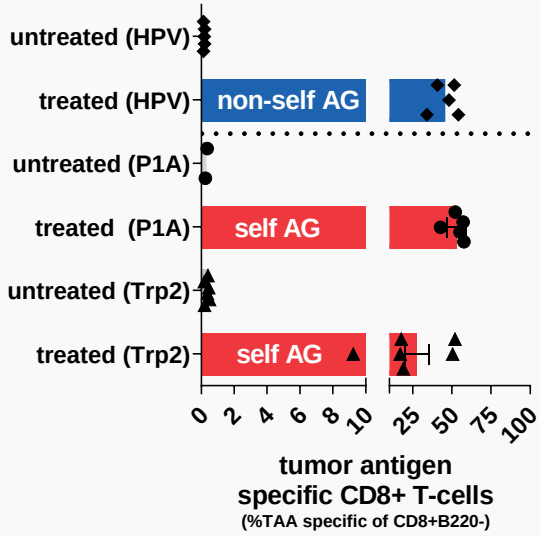
Oncoviral Antigens	Tumor Associated Self-Antigens	Neoantigens (Shared Driver Mutations)
HPV: Human papillomavirus **HBV**: Hepatitis B virus EBV: Epstein–Barr virus HTLV: Human T-lymphotropic virus 1	**PAP, PSA, PSMA**: Prostate Tyrosinase, Melan-A CEA MART-1, HER2, WT1, MUC1, MAGE, GAGE, NY-ESO-1, …	**KRAS**: Pancreatic, colorectal, lung cancers p53: Breast cancer, bone and soft tissue sarcomas, brain tumors and adrenocortical carcinomas BRAF: Melanoma, colorectal carcinoma, NSCLC PIK3CA: Breast, colon, endometrial cancers

Bolded *antigens represent targets under development internally or through partnership/collaboration*

Preclinical Evidence Suggests that Arenavirus Vector Technology Works Against Self-Antigen Driven Cancers

Induction of self-antigen specific CD8+ T cell responses and increase in TILs is comparable to activity demonstrated against non-self antigen

Strong T cell generation in self-antigen models



HB-300: Unmet Medical Need in Metastatic Castrate-Resistant Prostate Cancer

The Prostate Cancer Challenge

- Very common cancer in men
- Disease progression ultimately leads to metastatic Castrate-Resistant Prostate Cancer (mCRPC)
- High unmet need with standard of care:
  - Androgen Receptor inhibitor (e.g. abiraterone, enzalutamide) +/- Androgen Deprivation Therapy or docetaxel regimens: rPFS 16m+ in 1L setting
  - Therapy is switched after progression on initial therapy for mCRPC

HB-300's Potential Solution

- Replicating arenaviral vectors each encoding prostate-specific antigens PSA and PAP
  - HB-301 = Lymphocytic Choriomeningitis Virus (LCMV)
  - HB-302 = Pichinde Virus (PICV)
- Alternating 2-vector HB-302/HB-301 Ph1 Enrolling
  - Regimen: Q3W for initial 5 administrations, then Q6W
  - Intravenous (IV) delivery
  - Minimal number of dose levels based on HB-200 experience: 2
  - Number of patients: ~35
  - Phase 1 primary endpoints:
    - Safety
    - Recommended Phase 2 Dose

NCCN Guidelines for Prostate Cancer Version 2.2022
CancerMPact Treatment Architecture EU, Prostate Cancer

Partnered Programs

HB-700: One Product For Three Cancers - Pancreatic, Colorectal, and Lung by Targeting Five KRAS Mutations

KRAS - Large Unmet Medical Need

KRAS

- KRAS is a gene that acts as an on/off switch for cell growth
- KRAS mutations are among the most common mutations that cause cancer[1]

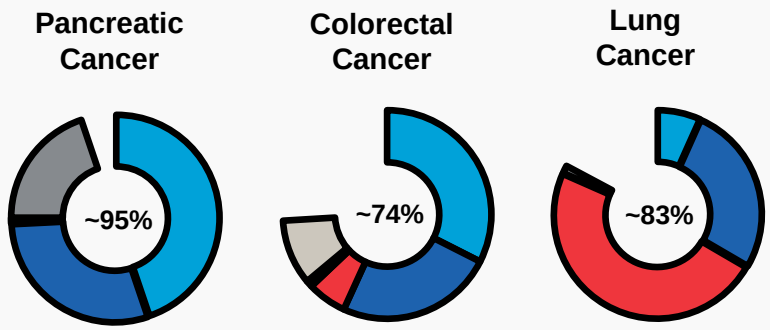
Prevalence

- ≥ 80% in pancreatic[2], ~30% in colorectal[2], 15-20% in lung[2]; also prevalent in many other cancer types

Market Potential

- 2021: ≥ 200,000 patients in the US and EU who could have benefited in just the pancreatic, colorectal, and lung indications[3]

Targeting Five Most Relevant Mutations



Analysis provided by Catenion.

HB-700 Roche Collaboration: $25m Upfront, Up to ~$930m in Future Milestones And Up To Mid-teen Royalties

License for HB-700 KRAS program and option for a second undisclosed arenaviral immunotherapy

Development Path & Funding

Preclinical

- HOOKIPA responsible for all preclinical development
- Funded by upfront and milestone payments

Phase 1b

- HOOKIPA responsible for Phase 1b trial
- 50/50 cost-sharing
- Funded by IND related milestone payments

Further development

- Roche responsible for all R&D, manufacturing, commercialization
- Roche funds all post phase 1b

Financial Terms

Total of $955m in upfront and milestones

HB-700 KRAS mutant therapy

- R&D and commercial milestones
- Tiered royalties: high single-digit to mid-teens %

Undisclosed novel arenaviral therapy

- $15m at option exercise
- R&D and commercial milestones
- Tiered royalties: high single-digit to mid-teens %

HBV: Gilead on Track to Dose First Subject in 2023
HIV: HOOKIPA to Progress Program Through Phase 1b Study; IND in 2023

GILEAD **Collaboration**

HBV Cure
Hepatitis B Virus

- Hookipa's responsibilities
  - Vector design
  - Manufacturing and supply of clinical material
- Terms
  - $190m development and commercialization milestones
  - High-single digit to mid-teen % royalties
  - All costs borne by Gilead, including full Hookipa R&D cost
- **FPI dosed in Q2 2023**

HIV Cure
Human Immunodeficiency Virus

- Agreement amended on February 15, 2022
  - Hookipa responsible for Phase 1b clinical trial
  - Gilead retains exclusive option post Phase 1b
- Funding $54m to conduct Phase 1b
  - $19m in a non-refundable payment in Q1 2022
  - Equity at a market premium
    - $5m in Q1 2022
    - $30m any time before 12/2023
  - Substantial option exercise fee after Ph 1b or rights back
  - $240 million development + commercialization milestones
  - Mid-single digit to low double-digit % royalties
- IND 2023

Summary & Outlook

Investment Highlights

1. Robust PoC of Arenavirus T cell activation mechanism

2. Lead Phase 2 oncology program ‘HB-200 + pembrolizumab’ in HPV16^{+} head and neck cancer

3. 2 further clinical programs in 2023 in H1 2023
   - HB-300 prostate cancer
   - HB-400 HBV functional cure

4. Strong partnerships Roche GILEAD MERCK

5. $110.0m available cash as of 03/31/2023
   additional $30m Gilead equity facility
